

Month 5 — Frozen decisions and immediate actions

ICT 2017 Core Content Month 05 (18 lectures) is complete as a position / quarterly annotation layer. Slices 0–10 are signed off. There is no Slice 11.

Month 5 describes the position; Month 9 selects the session ticket.

Finalized architecture

M5 Position / Quarterly → M6 Swing / Monthly → M7 Weekly / OSOK → M8 ICT Day → M9 Session / Candidate / Ticket.

position_opportunity = true does not mean a trade was selected. It does not create a ticket, size, persist file, candidate row, or order.

Decision	Frozen choice
Horizon	Position / quarterly / HTF. Not a session scalp.
Lectures	All 18. One process, not 18 bots.
Opportunity	Annotation only. Not a ticket.
Persist	No paper_position_m5.
IPDA	Labeled 20 / 40 / 60 only. No optimizer.
Quarterly shift	M5-owned. 3- or 4-month lookback. No Q1–Q4 enum.
Open Float vs pools	Two fields. Float can exist without a named pool.
Institutional swing	breaker_swing_point failure_swing none.
Entry technique	stop limit none — annotation, not an order.
Confirming evidence	10Y / yields / differentials / intermarket / seasonal. Not a gate.
Seasonal ideal	Label only. Not a named composite.
HTF PD	Identity (nearest premium / discount). No scan-order detector.
Money management	Guidance only. Not a generic opportunity gate.
M7 coupling	M5 publishes labeled IPDA. Must not inspect raw month7.
Gold files	Harness / oracle only. Engine must not read *.expected.json.

Opportunity gate (Slice 8, frozen)

true only when: (quarterly in_progress **or** IPDA 20/40/60) **and** (float present **or** named pool **or** named swing) **and** HTF PD timeframe is monthly | weekly | daily. Confirming rates / seasonal are not required.

Reconstruction freeze (Slice 10)

Fixture	Quarterly	IPDA	Swing	Opp	Ticket
m5_evidence_eurusd.json	in_progress	60	breaker_swing_point	true	none

Direct derive_month5() and DTR build_context() must agree. Known-state m5_reconstruction_eurusd.json is schema-only and is not in CASES_M5.

Immediate actions

- 1 Do not open Month 5 Slice 11. Treat any follow-on as a new phase with its own contract.
- 2 Optional close-out (same pattern as M6/M7): zip the agent as ftm-agent-month5.zip and run an E2E briefing on m5_evidence_eurusd.json.
- 3 Next curriculum phase, if continuing the month walk-down: Month 4 essence → Slice 0 glossary. No contracts until that glossary is signed.
- 4 Keep M5 optional on DayContext. Existing M6–M9 golds must stay green without requiring month5.

- 5 If later research wants an ideal-seasonal composite, open a new named slice. Do not sneak it into the generic opportunity gate.

Status

Month 5 S0–S10: COMPLETE + FROZEN. 17 September 2026.
